EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Brian C. Genco (Reg. No. 58,096) on 12/02/2008.

The application has been amended as follows:

Claims 13 and 21 have been amended as follows:

13. (Currently Amended) A computer-implemented method of viewing messages on a messaging service, comprising:

selecting a host computer implementing the messaging service by inputting a host computer identification;

selecting a queue supported by the messaging service by inputting a queue identification;

reading a message originating from a first test application and directed to a second application from the queue by a third application, wherein the message is not directed to the third application and the third application is not a normal

receiver of the message, and wherein the second application cannot read the message that is directed to the second application; [[and]]

storing the read message in a memory;

displaying full contents of the message using the third application; and

verifying that the message has a correct message structure, that information in fields of the message structure contain correct information, and that a destination of the message is correct by reviewing the full contents of the message displayed by the third application.

21. (Currently Amended) A computer-implemented method of testing a test application which generates messaging service messages, comprising:

running the test application;

generating a message by the test application directed to a second application;

posting the message to a queue;

inputting an identification of a host computer system maintaining the queue using a third application;

inputting an identification of the queue using the third application;

destructively reading the message from the queue with the third application,

wherein the message is not directed to the third application and the third application is not a normal receiver of the message, and wherein the second application cannot read the message that is directed to the second application;

storing the read message in a memory;
displaying the read message using the third application; and
verifying that the read message has a correct message structure, that fields of the message structure contain correct information, and that a destination of the message is correct.

REASONS FOR ALLOWANCE

2. The following is an examiner's statement of reasons for allowance:

The present invention is directed to method/system for managing messages on a queue which includes a third system/program to read and display messages from a queue wherein messages are originated from a first system/program and directed to a second system/program.

The closest prior art of record, Landfield et al. (US Patent No 5,928,333) teaches an electronic mail management system which can display records of messages in a queue but teaching away from reading the text of electronic message intended for someone else (see Landfield et al., Fig. 3A and [column 6, lines 58-65]).

However, Landfield et al fails to anticipate or render obvious the recited and combined features of "a messaging service system for directing the plurality of messages to the one or

more second systems through the queue, wherein a portion of the one or more second systems cannot read ones of the plurality of messages from the queue that are directed to the portion of the one or more second systems” and “a first module reads the plurality of messages from the queue, wherein the plurality of messages are not directed to the first module and the first module is not a normal receiver of the plurality of messages” as recited in independent claim 1 and similarly recited in independent claims 13 and 21.

These features, together with the other limitations of the independent claims are novel and non-obvious over the prior art of record. The dependent claims 2-12, 14-20 and 22 being definite, enabled by the specification, and further limiting to the independent claim, are also allowable.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled “Comments on Statement of Reasons for Allowance.”

3. Any inquiry concerning this communication or earlier communications from the examiner should be directed to **Phuong-Thao Cao** whose telephone number is (571)272-2735. The examiner can normally be reached on 8:30 AM - 5:00 PM (Mon - Fri).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, **Charles Rones** can be reached on (571) 272-4085. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
